

CASIO®

QT-6000

Get in touch with the future of hospitality with the bright and stylish touch-screen EPOS terminal with optional wireless networking

CASIO QT-6000

Stylish, powerful EPOS

that puts you in control

- **Stylish design**, small enough to fit into tight spaces with durable solid metal base
- **Speed up your sales** with a large, bright LCD touch screen and easy one touch operation
- **Expert floor planning**, with detailed table layout function
- **Easy and secure** operator log-on
- Easy **split bill** functionality
- **Comprehensive reporting**, including time and attendance and end of day
- Optional **CASIO Hospitality back office software** for complete stock management
- Improve customer service with **ORDERMAN Wireless Waitressing** hand-held terminals, enabling orders to be sent directly from the table to the kitchen and bar

Stylish, sturdy design that looks good in any environment

The QT-6000 features a large, bright 12.1" LCD touch screen. The screens angle can be adjusted for optimum viewing in any condition. The terminals base is made of a sturdy, solid metal die-cast construction.

Print and display what you need to see

The QT-6000 allows you to print or display useful instructions for the kitchen or bar staff, without the customers receipt changing. For example, if your customer orders a cocktail, the recipe can automatically print at the bar with the order making it easy for the bar staff to correctly prepare. If your kitchen staff refer to menu items by number, such as in a Chinese restaurant, the kitchen orders can print as numbers instead of names. The QT-6000 is designed to easily adapt to and enhance your current operational methods, increasing productivity.

Simplify and speed up your sales processes

The QT-6000's intuitive user interface features a clear, concise visual screen layout which can incorporate graphical icons as well as one-touch operation for popular items. This makes operation quick and easy at the point of sale, allowing you to maximise sales in peak periods. The QT-6000 can also be programmed to give sales prompts, such as for additional sales of side orders or details of cooking styles, to ensure you correctly prepare the customers order.

Expert floor management

With up to three separate full screen table layouts, 10 half screen layouts and an open tab/check screen, you can see your restaurant at a glance. The status of each table will be displayed on the table layout, allowing easy identification of occupied tables,

booked tables, tables with split bills and tables that have received their bill. So when a customer comes into your restaurant without a reservation, you will be able to see immediately whether you can accommodate them and when.

Easy, secure operator log-on

Staff can log-on to the QT-6000 by use of a personalised Dallas key. When the Dallas key is inserted, the operator is immediately signed on at that terminal and when the key is removed, they are logged off. Dallas keys

can also be configured to provide the authority for price changes. For example only the managers Dallas key can allow happy hour pricing to take affect.

The QT-6000 supports floating operators, so staff can start an order at one terminal and complete it

at another if needed. A screen saver with advertising messages can be displayed when no operator is logged onto the terminal.

Easy, graphical split bill operations

To simplify the splitting of bills, the QT-6000 has a one-touch graphical screen that allows you to see all the items a table has ordered on the left hand side of the screen and the bill split on the right hand side. The bill can be split up to 10 different ways and you can even split the costs of a bottle of wine!

If your customers move table during the evening, the simple item/ table transfer operation will ensure you keep track of what they have ordered, making sure there are no errors when they receive their bill.

Reporting options to keep you in control of your stock and staff

With the QT-6000s' comprehensive item and group reporting capabilities, you will always be aware of your key selling items and lines. End of day cashing-up reports can be conducted per terminal and overall, allowing you to immediately see your daily turn-over. Time and attendance reports make it easy for you to see when each staff member has worked, with a report of working hours compared to sales turnover ensuring staff are working the correct hours.

Clerk reports help you to monitor staff performance against a variety of options including the number of voids/ no sales per operator and how many sales they have made of a promotional item, allowing you to reward your best sales people.

Easy networking and secure communications between terminals

Communication between terminals is made using Ethernet, TCP/IP or WLAN, all of which can be configured easily. As the QT-6000 uses CASIO proprietary solid state technology, communications between terminals are more secure. When the terminals are networked, a comprehensive printer sharing function is enabled allowing orders to be printed at a variety of places from each terminal. Networking the terminals also eliminates duplication of work, as changes made on one terminal can be automatically sent to the other terminals.

For added security, networked QT-6000 terminals support key stroke monitoring, allowing you to monitor the key strokes an operator is making on one terminal from another terminal. This allows you to ensure the items that are registered and are the same items being sold to the customer.

Fail safe data back-up for your peace-of-mind

The QT-6000 can be configured to automatically back-up all program information to CompactFlash (CF) card, ensuring you never have to worry about re-programming the terminal and minimising "down-time". Sales reports can also be saved to CF card, allowing them to be easily transferred to a PC for manipulation in programs such as Microsoft® Excel.

CASIO

Flexibility to meet your business needs

CASIO® QT-6000

The QT-6000 links to a variety of Hotel Property Management Systems, as well as Liquor dispense management systems, M-Pad kitchen monitoring system and till monitoring camera systems.

Wireless Waitressing

The QT-6000 links to the ORDERMAN DON, a Wireless Waitressing solution that improves profitability, efficiency and customer service. By allowing your staff to submit orders directly from the table they are faster, less likely to miss orders and can be more

attentive to customers, giving better customer service and increasing the value of orders.

The ORDERMAN DON is a unique device, developed especially for the varied indoor/ outdoor hospitality environment. It utilises a different radio system than standard WLAN IEEE802.11b/g, which makes it more reliable, less susceptible to interference and more secure. The DON can operate for up to 16 hours on one battery charge and up to 50 metres away from the base station indoors and is even water and drop resistant to 1.2 metres. The screen can be viewed in bright, outdoors conditions; and in dark conditions an automatic backlight illuminates the buttons, making the DON suitable for all environments.

CASIO Hospitality back office software

Comprehensive stock, sales and program management system enabling complete control of your stock and profit including:

- Full product database with simple addition and amending of product details
- Simple and logical purchase order processing
- Comprehensive stocktaking showing true item profit
- Daily cashing up sheet
- Comprehensive keyboard layout program allowing for different button sizes, shapes, images and colours
- Easy drag and drop facility for adding new products and functions to the keyboard

Wall mount (optional)

A wall mount option is available to maximise available space.

Magnetic card reader (optional)

A magnetic card reader is available for customer identification and future use.

External remote display (optional)

Products are displayed on the external remote display using a wide 3-colour backlit LCD which can be read easily by the customer.

External thermal printer (optional)

The high-speed UP-360 external thermal printer can be used for printing receipts, remote orders and sales reports.

Specifications
