

Automatically Communicate with your Epos system from the comfort and security of your Home or Office

Our Back Office Management Software TMS automatically collects detailed Sales information from your Epos system, either at your premises via the internet or over a standard Telephone line. Reports can be called up on the computer screen, printed, or exported to certain other software packages, such as Excel or Sage Line 50. We can also configure your system to print a pre-defined selection of daily and weekly reports.

Price, Product Maintenance, and Screen Layouts

This allows you to add products and change prices from your computer at Home or in the Office. Call up your products and instantly see your cost, current selling price and the margin you are making. Changes you can make can be sent automatically down to your Epos system.

Look Back in Time

Our software maintains a detailed Sales History of all your products, staff, cash and hourly transactions. This allows you to easily compare how different days, weeks, months and years figures compare to each other. Use the historical figures to see how Offers and Promotions have affected sales, how staff are performing and when the busiest periods are.

Keep Track of Your Stock

Our Back Office Software contains a powerful stock management system keeping you in control.
